air pollution has become the world s greatest
environmental health risk and science is only
beginning to reveal its wide ranging effects
globally 19 000 people die each day from air
pollution killing more than hiv aids
tuberculosis malaria and car accidents
combined what happened to the air we breathe
sustainability journalist tim smedley has
travelled the world to try and find the answer
visiting cities at the forefront of the fight
against air pollution including delhi beijing
london and paris with insights from the
scientists and politicians leading the battle
against it and people whose lives have been
affected by it clearing the air tells the full
story of air pollution for the first time what
it is which pollutants are harmful where they
come from and most importantly what we can do
about them air pollution is a problem that can
be solved the stories uncovered on this
journey show us how clearing the air is
essential reading for anyone who cares about
the air they breathe and this much becomes
2023-06-06 the fight against air pollution we

decade ago the non coding part of the genome
was considered without function rna sequencing
studies have shown however that a considerable
part of the non coding genome is transcribed
and that these non coding rnas nc rnas can
regulate gene expression almost on weekly
basis new findings reveal the regulatory role
of nc rnas exert in many biological processes
overall these studies are making increasingly
clear that both in model organisms and in
humans complexity is not a function of the
number of protein coding genes but results
from the possibility of using combinations of
genetic programs and controlling their spatial
and temporal regulation during development
senescence and in disease by regulatory rnas
this has generated a novel picture of gene
regulatory networks where regulatory nc rnas
represent novel layers of regulation
particularly well characterized is the role of
micrornas mirnas small nc rnas that bind to
mrnas and regulate gene expression after
transcription this message is particularly
clear in the nervous system where mirnas have
been involved in regulating cellular pathways
controlling fundamental functions during
development

shown that neuronal mirnas are tightly
regulated by electrical activity at the level
